Use of blog technologies in the educational process

BOBOMUXAMEDOVA SHOIRA AGZAMDJON QIZI

Basic doctoral student of Tashkent State Pedagogical University named after Nizami

Abstract: Through a comprehensive program for the development of information and communication systems, distance learning and computerized conferences are being conducted in order to reform the continuous education system of the country, introduce information technology and improve the effectiveness of education. , the creation of distance learning systems and their introduction into the teaching and learning process. At the same time, there is a need to expand the scope of Web technologies in the learning process. The Strategy for the Strategy for the Development of the Republic of Uzbekistan sets out the tasks of "Creating the use of. information technology in educational process by means of new methods and tools" at the Higher Education Institutions, and improving the methodological bases.

KEY WORDS: technology, diligent, issue, economy, computer, recognize

1. INTRODUCTION

At the present time, the education system is completely new, there is a need for a reflection of the content of each science, its radical reform and its linkage in terms of its continuity and continuity in its learning stages. One of the main factors in the reform of education in Uzbekistan is related to the introduction of modern information and communication technologies into these processes and the convening of the chambers of the Oliy Majlis, dedicated to the solemn ceremony of Shavkat Mirziyoyev's nomination as President of the Republic of Uzbekistan, ii is necessary to attract more advanced technologies and information and communication systems in all spheres in his speech at the plenary session." The state of development of modern technologies, first of all, depends on the intellectual potential of the society, in particular, the development of education. The content and quality of education is seen as a priority in society. Particular attention is paid to the informatization of education in the developed and developing countries of the world. In this regard, there is a need to develop education, improve its effectiveness, and introduce new information technologies in education. The Resolution of the President of the Republic of Uzbekistan from March 26, 2013 of No. 1942 "About measures for further enhancement of system of personnel training in the field of information and communication technologies", from June 27, 2013 "About further development of National information and communication system of the Republic of Uzbekistan 1989, "On Strategies for Further Development of the Republic of Uzbekistan", dated February 7, 2017, and other normative This dissertation research will serve a certain extent in the implementation of the tasks set forth in legal acts. Nowadays the rapid development of the Republic of Uzbekistan is accompanied by restoration of national

values, entry into the market economy, improvement of economic relations, adoption of the national curriculum, reforms in the sphere of public education: the establishment of academic lyceums and professional colleges indicates its consistency. At present, great attention is paid to automation of educational process. One of the tools to automate the learning process is to use computer technologies. This desertion case is dedicated to the methodology of organizing and conducting practical workshops on the use of Wiki technologies. Also, the stages of training workshops are developed in line with modern requirements. Therefore, special attention is paid to the development of practical training on "animation technology" on wiki technologies. At the same time, the practical significance of wiki technologies in the learning process is that each student expresses his / her own ideas and makes new changes. At the same time, the original version of the data will remain. This is aimed at achieving simpler and simpler data, and significantly enhancing the quality of education. At the evolving stage of scientific and technological progress, the rapid increase in information and the limited time available for its use in the teaching process require the introduction of new technologies in the education system. One of the ways to improve the content of education is to create opportunities for students to learn independently, to create the necessary conditions for the formation and development of educational information sources. The basis of the educational process is a high-quality and high-tech environment. Although its creation and development is technically complex, such an environment serves to improve the education system, the radical introduction of information technology in education. Modern information technology has great potential for students in the process of transmitting, storing, and retrieving information. Education right now Institutions have created a wide range of information and educational resources in electronic form, but there is no systematic approach to their use. This is primarily due to the lack of scientific and methodological base, insufficient skills and competencies in the use of modern information technology in education, incomplete solution of methodological problems. To the educational process despite the successes in the introduction of information technology, the results achieved are scattered. We believe in informing the educational process The direction of development is directly related to the creation of information-educational environments through the integration of different educational information resources.

2. METHODOLOGICAL UNITS.

A blog ("network journal or event diary") is a blog, the main content of which is constantly added posts, views or multimedia website. Depending on the content, blogs can be personal, group (corporate, club) or social (open). Keeping a blog means that there is software that allows the average user to make changes and addings to posts on the Internet. The use of blogs allows to demonstrate the following functions that are suitable for pedagogy: communicative, memoirs, integration and retention of social ties, reflection or self-development, psychotherapeutic.

Possible directions in the learning process:

- Source of pre-published winter information by the teacher.

- Organization of seminars on the topics of the curriculum.

- Organization of distance learning for a specific group.

The tasks that students post on their blogs include reviewing and publishing control work.

Blogs offer many benefits for education:

- Promotes autonomous learning by providing opportunities for students to take more control of their learning
- Motivates students to become better readers and writers.
- Promotes discussion among students.
- Encourages the use of the Internet and the Web among students (and teachers)
