Abstract

As the world reels from the effect of the pandemic, people and organisations across have greatly been impacted by the virus. Numerous lessons are being learnt across all front. The impact has left numerous people connecting to workplaces from home across the globe. This new norm has also left many vulnerable areas in the field of security. This paper aims to highlight security issues and their impact on society at large. The catastrophic cybersecurity issues over the ages have been discussed and envisioned in today's digital world, which paves the way for a cyber pandemic making it a reality.
